

Universal Shower Slider	Inventor: Kosaburo Watari
Abstract	February 15, 2004
<p>The Universal Shower Slider is a uniquely portable unit that can be attached to any existing shower neck pipe. It will provide the user with the convenience to adjust the height and sway of any hand held shower device. The universal shower slider is constructed of 3/4" PVC pipe and various 3/4" fittings, It has a clamp at the top and a suction cup at the bottom.</p> <p>It also includes a traverse rod and a showerhead adjustment assembly that provides a 3/4" male adapter connector. The Universal Shower Slider in its fully assembled configuration is clamped to the existing shower neck pipe at the top and is secured by a standard 1" round suction cup at the bottom. The traverse rod provides a track upon which the showerhead adjustment assembly rides up and down. Moreover any handheld hose is thereby providing the water spray screwed to the existing shower neck pipe.</p>
